

“Lecturers without borders” (LeWiBo, www.scied.network) project enables scientists to contribute to additional education by delivering free outreach lectures and seminars for children and adolescent students from low and middle-income countries around the world. Since 2018 LeWiBo coordinates scientists traveling around the globe to deliver seminars in local educational institutions. During the past year scientists of the LeWiBo network visited numerous countries with free lectures for high school and university students focusing on several countries in Asia (Indonesia, India, Nepal), Africa (Senegal, Tansania) and Europe, as well as collaborated with local educational associations in these countries.

“Lecturers without borders” was started in 2017 by four co-founders Liubov Tupikina (France, Russia), Mikhail Khotyakov (Germany), Athanasia Nikolau (Italy, Germany), Delphine-Clara Zemp (Germany, Indonesia, Greece).

Since 2018 “Lecturers without borders” was hosted at CRI (France) and since then interacted with researchers and students projects

“Lecturers without borders”: “One of the main goals of our project is to facilitate exchange between different educational associations. We are grateful for interactions with incredible associations and scientists and we stress out that the main contribution comes from scientists who are making lectures in remote areas while traveling and associations and educational institutions, whom we are linking together.”
